Professional inquiries: heyimfuaad.me/contact

PROFESSIONAL STATEMENT

I build software for financial decision-making, customer workflows, and AI-assisted products. My work emphasizes clear product interfaces, inspectable technical choices, and measurable, reproducible behavior. I am currently pursuing undergraduate studies at Georgia State University.

AREAS OF FOCUS

Software engineering, fintech, AI provider orchestration, reliability, front-end user experience, workflow automation, risk-aware product design, and system observability.

SELECTED TECHNICAL PROJECTS

AyahOS / Goblin Assistant

AI platforms

An evolving multi-provider assistant architecture with runtime routing, a user-facing chat surface, controls around model and provider behavior, operational telemetry, and deployment workflows.

- Problem: deliver resilient chat when models, quotas, infrastructure, and provider endpoints vary.
- Approach: modular routing components, controls, fallback paths, and clearly distinguishable execution evidence.

RIZZK Risk Calculator

Fintech

A position-sizing and risk-to-reward application developed to reduce manual arithmetic and support consistent decision-making under time pressure.

- Problem: position-sizing errors can produce avoidable financial exposure.
- Approach: model trading decisions as explicit, inspectable calculations and simple user workflows.

GradeM8

Applied AI

A grading assistant prototype for rubric-based document assessment and structured feedback.

- Approach: combine document processing, inference workflows, and automated verification.

Elbey Projects / Client Websites

Customer websites

Mobile-first customer websites with service discovery and conversion-oriented booking or contact flows.

ADDITIONAL SOFTWARE WORK

Personal portfolio

Web product

Developed a Next.js and TypeScript project portfolio that presents case studies, professional background, contact routes, and selected live demos.

ShopMindAI

Diagnostic workflow prototype

Explored an automotive diagnostic assistant focused on symptom intake, ranked potential causes, and confirmation-oriented guidance.

PROFESSIONAL EXPERIENCE

Independent Developer and Product Builder

2023 - present

Independent development of software products and client applications, including API integration, user-interface delivery, model-assisted workflows, and infrastructure administration.

Junior Account Manager - ABC Consultants Group

2022 - 2023

Supported client communications, documentation, Salesforce tracking, and service coordination.

Marketing Intern - Mixdiety

2021 - 2022

Contributed to marketing research, outreach, reporting, and campaign workflow coordination.

TECHNICAL COMPETENCIES

Python; TypeScript; JavaScript; SQL; React; Next.js; FastAPI; Docker; PostgreSQL; Redis; Git; Linux; cloud deployment; model APIs; automated testing; operational observability.

EDUCATION

Georgia State University, Atlanta, Georgia. Undergraduate studies in progress. Relevant interests include quantitative analysis, financial decision systems, software engineering, and statistical reasoning.

SELECTED LEARNING AND CERTIFICATIONS

LinkedIn Learning: Excel Quick Tips (2025); Creating Your Personal Brand (2025).
