

Fuaad Abdullah

Finance student and developer building tools I use in my own trading.

fuaadabdullah@gmail.com · (404) 494-6262 · heyimfuaad.me · Atlanta, GA

Summary

Finance student and full-stack developer building trading, automation, and AI tools from lived workflow experience, not classroom hypotheticals.

I ship products across the stack, from trader-facing calculators and reporting workflows to production AI backends and client sites, with an emphasis on speed, reliability, and measurable outcomes.

Open to: fintech software engineering roles, internships, and selective contract work.

Skills

Languages & Frameworks: Python · TypeScript · JavaScript · Rust · SQL · React · Next.js · Streamlit · FastAPI

Data & Automation: pandas · numpy · ETL pipelines · spreadsheet automation · reporting workflows · dashboard delivery

Infrastructure: Docker · Linux · Git/GitHub · WebSockets · REST APIs · PostgreSQL · Redis · Vercel · Fly.io · Azure

AI & ML Ops: Model hosting · Hugging Face Spaces · inference pipelines · LLM provider routing · observability

Trading & Ops: Risk management · position sizing · trade journaling · weekly performance reviews · execution discipline

Experience

Independent Day Trader & Full-Stack Developer

Self-employed · Feb 2023 – Present

- Trade equities under strict risk controls while shipping tooling for live trading workflows, reporting, and client delivery.
- Shipped RIZZK, a production risk calculator that cut position-size mistakes by ~90% and made sizing decisions ~50% faster in live trading sessions.
- Built Streamlit dashboards, export tools, and spreadsheet automations used in daily workflows and freelance client reporting.
- Operate with weekly review loops, documented trade logs, and measurable execution discipline that carry directly into product work.

Jr. Account Manager

ABC Consultants Group · May 2022 – Feb 2023

- Owned client communications, project documentation, and status tracking to keep delivery and invoicing on schedule.
- Maintained Salesforce and internal trackers to surface account health and reduce the risk of missed deliverables.
- Coordinated cross-functional teams, clarified blockers early, and kept project updates actionable for stakeholders.

Marketing Intern

Mixdiety · Jun 2021 – Feb 2022

- Conducted market research and campaign reporting that informed targeting and follow-up priorities.
- Ran multi-channel outreach across email and social, then packaged performance insights for leadership review.
- Improved reporting clarity so campaign ROI and next actions were easier to evaluate quickly.

Education

Georgia State University · B.B.A., Finance · 2020 – 2025

Selected coursework: Financial Accounting · Business Technology · Marketing Principles

North Springs Charter School · High School Diploma · 2017 – 2019 · GPA 3.7

Projects

Goblin Assistant

Production multi-provider AI assistant with routing, observability, and privacy controls.

FastAPI · Next.js · TypeScript · PostgreSQL · Redis · Docker · Fly.io · Vercel

- Built a production AI system spanning frontend, backend, infra, and provider routing instead of a single demo surface.
- Added live status, latency, and routing visibility across 4 observable workflow views and 3 deployment layers.

RIZZK Calculator

Production position-sizing and risk management tool for active day traders.

Python · Streamlit · Plotly · Docker · Azure

- Cut position-size mistakes by ~90% and sped up sizing decisions by ~50% in live trading sessions.
- Shipped to production in 4 weeks and built it around real-money trading workflows I use myself.

GradeM8

AI grading assistant with rubric-based feedback and production-minded test coverage.

Python · Gradio · Hugging Face · pytest

- Reduced routine grading time by 60-70% while supporting 4 document formats.
- Backed the app with 285+ tests to keep document parsing and grading flows reliable.

Portfolio

Recruiter-ready portfolio and case-study site built for performance, accessibility, and SEO.

Next.js · React · TypeScript · Tailwind · MDX · Vercel

- Achieved 100/100 Lighthouse scores and sub-2s global load times.
- Designed and shipped the site in 2 weeks with resume delivery, case studies, and SEO foundations built in.

Elbey Projects

Conversion-focused website for a mobile mechanic business.

Next.js · TypeScript · Tailwind · Vercel

- Shipped 7 customer-facing pages in 1 week with 3 core booking conversion paths.
- Delivered a complete, SEO-ready client site optimized for mobile service discovery and booking.

Why Recruiters Reach Out

- Rare finance-plus-engineering profile: I understand markets and trading workflows, then build the software around them myself.

- Strong fit for teams that want an intern or early-career engineer who can ship user-facing product work, APIs, automation, and operational tooling without needing every task over-scoped first.
