Resume

Resume & Profile

Fuaad Abdullah

Finance major at Georgia State University · freelance developer · day trader. I build practical fintech tools, trading dashboards, and portfolio sites with a focus on discipline, data, and clean execution.

[Download PDF](#)[View LinkedIn](#)[Email](#)

For recruiters · clients · schools

Summary

I operate at the intersection of finance, trading, and software. I use code to turn messy ideas into systems: risk tools that keep traders honest, dashboards that surface real metrics, and portfolio sites that look professional instead of improvised.

This page is for recruiters, clients, and schools: a clear view of what I've built so far, what I'm studying, and where I'm trying to go next.

Currently open to

- Internships in finance, fintech, or software engineering
- Freelance / contract projects (web, dashboards, tools)
- Transfer / advanced study opportunities in finance, data, or technology

Where I add value

- Turning fuzzy requirements into concrete, scoped builds
- Bridging trading / finance concepts with real software
- Shipping small, reliable releases instead of half-finished ideas

Academic Profile

Degree

B.B.A. Finance (in progress) · Georgia State University

Building a foundation in markets, risk, and financial decision-making, with a growing focus on fintech and quantitative tools applied through personal trading and software projects.

Academic interests

Risk management, market microstructure, behavioral finance, trading systems, and how software can enforce discipline instead of emotion in financial decisions.

Next steps

Exploring transfer and advanced programs that take finance, data, and technology seriously and value hands-on, project-based work alongside traditional coursework.

Experience & Projects

Freelance Development

Ongoing

Building small, production-ready web apps for clients and students using Next.js, TypeScript, and modern UI patterns. Work includes portfolio sites optimized for recruiters, trading dashboards, and fintech tools.

- End-to-end delivery: scope → build → deploy → documentation
- Designed recruiter-friendly portfolio sites with strong SEO, clean layout, and fast performance scores
- Translated vague client goals into concrete scopes, timelines, and deliverables

Position Sizing & Risk Calculator (codename "RIZZK")

Personal project / Side work

Web-based position sizing and risk-reward calculator for day traders. Calculates risk per trade, position size, and R:R ratios in real time. Built as a Python + Streamlit app with a tested calculation core and deployed using Docker and Azure Web Apps.

- Applied trading and finance knowledge to build a tool traders can use during live sessions
- Implemented unit-tested calculation logic to keep outputs reliable under different market scenarios
- Designed end-to-end: from concept and UX to deployment and ongoing iteration based on real usage

Portfolio Site • heyimfuaad.me

Personal branding project

Designed and built this site to present services, showcase projects, and provide a professional resume hub for recruiters, clients, and schools. Focus on SEO, accessibility, and mobile performance.

- Implemented structured metadata (JSON-LD), OG images, and sitemaps to support search engine visibility
- Tuned layout, typography, and color system for a calm, earth-toned, dark-mode experience that still meets accessibility standards
- Deployed on Vercel with automated CI/CD and integrated analytics to measure traffic and engagement over time

Skills

Technical

Next.js, React, TypeScript, Tailwind, Python, Streamlit, FastAPI, REST APIs, Vercel, Azure, Git, basic CI/CD.

Finance & trading

Day trading basics, risk/reward, position sizing, journaling, performance tracking, and building tools that support discipline instead of impulse.

How I work

Calm, low-ego collaborator. Prefers clear scopes, written plans, and small, testable launches over big promises and chaos.

Contact & Next Steps

Open to internships, part-time roles, project work, and transfer or advanced study opportunities that sit at the intersection of finance, data, and software.

Response time: Usually within 24 hours. Prefer email for initial contact, then we can hop on a call or schedule something in-person.
